The International Organization for Science and Technology Education was established to advance the cause of education in science and technology as a vital part of the general education of the peoples of all countries and to provide scholarly exchange and discussion in the field of science and technology education. Consistent with our mission to encourage the peaceful and ethical use of science and technology in the service of humankind, IOSTE opposes the use of science and technology by government or other organizations for military purposes against civilians. Its origins can be traced to a Symposium on World Trends in Science Education convened in August 1979 in Halifax, Nova Scotia, Canada. At the third symposium, held in Brisbane (Australia) in 1984, the informal circuit of 'World Trends' was transformed into a formal organization with members from over sixty countries.

Today, IOSTE has members from about eighty countries, and is officially recognized by UNESCO as a non-governmental organization. Membership of the International Organization for Science and Technology Education is open to all who subscribe to its Constitution.

Upcoming International Symposia

The XV IOSTE International Symposia

Science & Technology Education for development, citizenship and social justice
